For more information about the way to secure your network or to join a HomePlug AV network, please consult the User Guide available on the <http://support.sagemcom.com> website.

## Recommended use of a multiple plug adapter for Fast Plug 503P

-  Device is **OFF**.
-  Device is **ON**.
-  Device is in «**idle mode**» when LED flashes every 15 sec.

-  No powerline device detected on your network.
-  At least one powerline device is detected on your network.

-  Ethernet port is **not** connected.
-  Ethernet port is **connected**.

-  **Ethernet port**  
Use the Ethernet port to connect your equipments using the Ethernet cable provided.

-  **Security button**  
Press this button between,
  - 0-3 sec to join a powerline network
  - 7-10 sec to leave the current powerline network or start a new network
  - 12-15 sec to return a device to its original factory default configuration

### Important :

- Your devices have been already paired during manufacturing and will associate automatically once they are plugged into the mains : no setup is required.
- The security button cannot be used when the device is in idle mode.

For more information on how to increase security on your network or add additional devices to an existing powerline network, please consult the User Guide available on the <http://support.sagemcom.com> website.
